

## SPECIFICATION

### Amla Oil

| Parameters       | Specification                                                                       |
|------------------|-------------------------------------------------------------------------------------|
| Appearance       | Yellow to golden liquid                                                             |
| Molecular Weight | 860 g/mol                                                                           |
| Boiling Point    | 300 °C                                                                              |
| Melting Point    | -5 °C                                                                               |
| Flash Point      | 230 °C                                                                              |
| Purity           | 98–99%                                                                              |
| Refractive Index | 1.46                                                                                |
| Solubility       | Practically insoluble in water;<br>soluble in ethanol and other<br>organic solvents |
| Uses             | Hair oil, skin care, traditional<br>medicine                                        |
