

## SPECIFICATION

### Caprifloren

| Parameters       | Specification                                                     |
|------------------|-------------------------------------------------------------------|
| Appearance       | White crystalline solid                                           |
| Molecular Weight | 182.22 g/mol                                                      |
| Boiling Point    | 210 °C                                                            |
| Melting Point    | 92 °C                                                             |
| Flash Point      | 75 °C                                                             |
| Purity           | 98–99%                                                            |
| Refractive Index | 1.512                                                             |
| Solubility       | Soluble in ethanol and acetone;<br>very slightly soluble in water |
| Uses             | Fragrance ingredient; perfume<br>industry                         |
