

## SPECIFICATION

### Copper Oxalate

| Parameters       | Specification                         |
|------------------|---------------------------------------|
| CAS Number       | 814-91-5                              |
| Appearance       | Green powder                          |
| Molecular Weight | 187.60 g/mol                          |
| Boiling Point    | 300 °C                                |
| Melting Point    | 190 °C                                |
| Purity           | 99–99%                                |
| Solubility       | Insoluble in water, soluble in acids  |
| Uses             | Pigment, catalyst, analytical reagent |
