

## SPECIFICATION

### Ferrous Chloride Powder

| Parameters       | Specification                                                   |
|------------------|-----------------------------------------------------------------|
| Appearance       | Green crystals                                                  |
| Molecular Weight | 126.75 g/mol                                                    |
| Boiling Point    | 1040 °C                                                         |
| Melting Point    | 677 °C                                                          |
| Flash Point      | 1000 °C                                                         |
| Purity           | 99–99%                                                          |
| Solubility       | Soluble in water                                                |
| Uses             | Reducing agent, catalyst, mordant<br>in dyeing, water treatment |
