

## SPECIFICATION

### Novasolve Ial

| Parameters       | Specification                                                  |
|------------------|----------------------------------------------------------------|
| Appearance       | Colorless liquid                                               |
| Molecular Weight | 60.095 g/mol                                                   |
| Boiling Point    | 82.4 °C                                                        |
| Melting Point    | -89.0 °C                                                       |
| Flash Point      | 11.0 °C                                                        |
| Purity           | 99–99.5%                                                       |
| Refractive Index | 1.377                                                          |
| Solubility       | Miscible with water                                            |
| Uses             | Solvent; cleaning agent; used in pharmaceuticals and cosmetics |
