

## SPECIFICATION

### Soluble Starch

| Parameters       | Specification                                       |
|------------------|-----------------------------------------------------|
| Appearance       | White powder                                        |
| Molecular Weight | 1000000 g/mol                                       |
| Boiling Point    | 200 °C                                              |
| Melting Point    | 150 °C                                              |
| Flash Point      | 210 °C                                              |
| Purity           | 98–99%                                              |
| Refractive Index | 1.52                                                |
| Solubility       | Soluble in water                                    |
| Uses             | Food thickener, binder,<br>pharmaceutical excipient |
