

## SPECIFICATION

### Tripotassium EDTA

| Parameters        | Specification                                             |
|-------------------|-----------------------------------------------------------|
| CAS Number        | 17572-97-3                                                |
| Appearance        | White powder                                              |
| Molecular Formula | C10H13K3N2O8                                              |
| Molecular Weight  | 405.50 g/mol                                              |
| Melting Point     | 240 °C                                                    |
| Purity            | 99.0–99.9%                                                |
| Refractive Index  | 1.55                                                      |
| Solubility        | Soluble in water                                          |
| Uses              | Chelating agent; used in analytical chemistry and buffers |
