

## SPECIFICATION

### Zinc Fluoborate 40%

| Parameters       | Specification                                                                       |
|------------------|-------------------------------------------------------------------------------------|
| Appearance       | Clear colorless liquid                                                              |
| Molecular Weight | 238.98 g/mol                                                                        |
| Boiling Point    | 100 °C                                                                              |
| Melting Point    | 0 °C                                                                                |
| Flash Point      | 100 °C                                                                              |
| Purity           | 40–40%                                                                              |
| Refractive Index | 1.350                                                                               |
| Solubility       | Soluble in water                                                                    |
| Uses             | Used as a zinc source in chemical synthesis and as a mordant in textile processing. |
