

## SPECIFICATION

### 4-Hydroxybenzaldehyde

| Parameters        | Specification                                                                                            |
|-------------------|----------------------------------------------------------------------------------------------------------|
| Cas Number        | 123-08-0                                                                                                 |
| Appearance        | Yellow To Tan Crystalline Powder                                                                         |
| Uses              | Intermediate In Pharmaceuticals, Fragrances, And Liquid Crystals; Precursor To Vanillin And Hydroquinone |
| Molecular Formula | C <sub>7</sub> H <sub>6</sub> O <sub>2</sub>                                                             |
| Molecular Weight  | 122.12 G/Mol                                                                                             |
| Boiling Point     | 310–311 °C                                                                                               |
| Flash Point       | 174 °C                                                                                                   |
| Solubility        | 12.9 G/L In Water; Soluble In Ethanol, Ether, Acetone                                                    |
| Hazards           | Causes Serious Eye Damage (H318); May Cause Respiratory Irritation (H335)                                |
| Purity            | 96-98%                                                                                                   |
| Refractive Index  | 1.5705 @ 130 °C                                                                                          |
