

## SPECIFICATION

### Aquaflora

| Parameters        | Specification                                        |
|-------------------|------------------------------------------------------|
| Appearance        | Pale yellow liquid                                   |
| Uses              | Used in aquatic floral blends, laundry, and air care |
| Molecular Formula | C12H18O                                              |
| Molecular Weight  | ~190 g/mol                                           |
| Boiling Point     | ~250 °C                                              |
| Flash Point       | ~95 °C                                               |
| Solubility        | Soluble in alcohols, oils                            |
| Hazards           | H315, H319 (skin/eye irritant)                       |
| Purity            | ≥98%                                                 |
| Refractive Index  | ~1.47                                                |
