

## SPECIFICATION

### Bergamote

| Parameters        | Specification                                                                      |
|-------------------|------------------------------------------------------------------------------------|
| Appearance        | Pale yellow to greenish yellow liquid                                              |
| Molecular Formula | C10H16O                                                                            |
| Molecular Weight  | 152.24 g/mol                                                                       |
| Boiling Point     | 197 °C                                                                             |
| Flash Point       | 60 °C                                                                              |
| Purity            | ≥ 95%                                                                              |
| Refractive Index  | 1.465 - 1.470                                                                      |
| Solubility        | Soluble in alcohol and oils, insoluble in water                                    |
| Uses              | Perfumery (citrus top notes, Earl Grey tea flavoring, aromatherapy for relaxation) |
