

## SPECIFICATION

### Neopentyl Glycol

| Parameters        | Specification                                                         |
|-------------------|-----------------------------------------------------------------------|
| CAS Number        | 126-30-7                                                              |
| Appearance        | Colorless liquid                                                      |
| Molecular Formula | C <sub>5</sub> H <sub>12</sub> O <sub>2</sub>                         |
| Molecular Weight  | 104.15 g/mol                                                          |
| Boiling Point     | 210 °C                                                                |
| Flash Point       | 62 °C                                                                 |
| Purity            | 98–99%                                                                |
| Refractive Index  | 1.462                                                                 |
| Solubility        | Miscible with water                                                   |
| Uses              | Crosslinking agent, plasticizer, intermediate for polyurethane resins |
