

## SPECIFICATION

### Ketone Formaldehyde Resin

| Parameters       | Specification                                                                       |
|------------------|-------------------------------------------------------------------------------------|
| Appearance       | Amber-brown solid                                                                   |
| Molecular Weight | 4000 g/mol                                                                          |
| Boiling Point    | 300 °C                                                                              |
| Flash Point      | 230 °C                                                                              |
| Purity           | 98–99%                                                                              |
| Refractive Index | 1.53                                                                                |
| Solubility       | Slightly soluble in water; soluble in acetone, toluene, xylene, and dichloromethane |
| Uses             | Adhesives for wood and plywood, laminates, coatings, and composite materials        |
