

## SPECIFICATION

### Acetone Cyanohydrin

| Parameters        | Specification                                                            |
|-------------------|--------------------------------------------------------------------------|
| CAS Number        | 75-86-5                                                                  |
| Appearance        | Colorless liquid                                                         |
| Molecular Formula | C <sub>4</sub> H <sub>7</sub> NO                                         |
| Molecular Weight  | 85.11 g/mol                                                              |
| Boiling Point     | 102 °C                                                                   |
| Melting Point     | -20 °C                                                                   |
| Flash Point       | -10 °C                                                                   |
| Purity            | 98–99%                                                                   |
| Refractive Index  | 1.46                                                                     |
| Solubility        | Partially soluble in water; soluble in organic solvents                  |
| Uses              | Intermediate in methyl methacrylate production; cyanohydrin intermediate |
