

## SPECIFICATION

### Lead Acetate Anhydrous

| Parameters       | Specification                                                                                             |
|------------------|-----------------------------------------------------------------------------------------------------------|
| CAS Number       | 0301-04-02                                                                                                |
| Appearance       | White crystalline powder                                                                                  |
| Molecular Weight | 325.29 g/mol                                                                                              |
| Boiling Point    | 400 °C                                                                                                    |
| Melting Point    | 322 °C                                                                                                    |
| Flash Point      | 0 °C                                                                                                      |
| Purity           | 98–99%                                                                                                    |
| Refractive Index | 1.59                                                                                                      |
| Solubility       | Soluble in water; soluble in ethanol                                                                      |
| Uses             | Analytical reagent; pigment and chemical synthesis; historical textile printing and photography processes |
