

## SPECIFICATION

### Lithium Hydroxide Anhydrous

| Parameters       | Specification                                                                                        |
|------------------|------------------------------------------------------------------------------------------------------|
| CAS Number       | 1310-65-2                                                                                            |
| Appearance       | White crystalline solid                                                                              |
| Molecular Weight | 23.95 g/mol                                                                                          |
| Boiling Point    | 1320 °C                                                                                              |
| Melting Point    | 462 °C                                                                                               |
| Flash Point      | 1000 °C                                                                                              |
| Purity           | 98–99%                                                                                               |
| Refractive Index | 1.5                                                                                                  |
| Solubility       | Soluble in water                                                                                     |
| Uses             | Used as a strong base in chemical synthesis, CO2 scrubbing, ceramics, and lithium battery production |
