

## SPECIFICATION

### Propyl Acetate

| Parameters        | Specification                                                            |
|-------------------|--------------------------------------------------------------------------|
| CAS Number        | 109-60-4                                                                 |
| Appearance        | Colorless liquid                                                         |
| Molecular Formula | C <sub>5</sub> H <sub>10</sub> O <sub>2</sub>                            |
| Molecular Weight  | 102.13 g/mol                                                             |
| Boiling Point     | 102 °C                                                                   |
| Melting Point     | -78 °C                                                                   |
| Flash Point       | -4 °C                                                                    |
| Purity            | 98–99%                                                                   |
| Refractive Index  | 1.387                                                                    |
| Solubility        | Slightly soluble in water; miscible with most organic solvents           |
| Uses              | Industrial solvent for coatings, inks, adhesives, and flavors/fragrances |
