

## SPECIFICATION

### Chromium Chloride

| Parameters       | Specification                                                                                                 |
|------------------|---------------------------------------------------------------------------------------------------------------|
| CAS Number       | 39345-92-1                                                                                                    |
| Appearance       | Dark violet to brown powder                                                                                   |
| Molecular Weight | 158.35 g/mol                                                                                                  |
| Boiling Point    | 993 °C                                                                                                        |
| Melting Point    | 610 °C                                                                                                        |
| Flash Point      | 1000 °C                                                                                                       |
| Purity           | 99-99.9%                                                                                                      |
| Refractive Index | 1.6                                                                                                           |
| Solubility       | Soluble in water                                                                                              |
| Uses             | Catalyst and precursor in chromium compound synthesis; mordant in dyeing; pigment precursor; research reagent |
