

## SPECIFICATION

### Sebacic Acid

| Parameters        | Specification                                                                                                   |
|-------------------|-----------------------------------------------------------------------------------------------------------------|
| CAS Number        | 111-20-6                                                                                                        |
| Appearance        | White to off-white crystalline solid                                                                            |
| Molecular Formula | C10H18O4                                                                                                        |
| Molecular Weight  | 202.25 g/mol                                                                                                    |
| Boiling Point     | 360 °C                                                                                                          |
| Melting Point     | 131 °C                                                                                                          |
| Flash Point       | 200 °C                                                                                                          |
| Purity            | 98–99%                                                                                                          |
| Refractive Index  | 1.46                                                                                                            |
| Solubility        | Sparingly soluble in water; soluble in ethanol and acetone                                                      |
| Uses              | Monomer for nylon-6,10 and various polyesters; used in plasticizers, lubricants, coatings, and specialty resins |
