

## SPECIFICATION

### Non Ferric Alum

| Parameters       | Specification                                                                                     |
|------------------|---------------------------------------------------------------------------------------------------|
| Appearance       | White crystalline solid                                                                           |
| Molecular Weight | 474.39 g/mol                                                                                      |
| Boiling Point    | 190 °C                                                                                            |
| Melting Point    | 92 °C                                                                                             |
| Flash Point      | 0 °C                                                                                              |
| Purity           | 98–99%                                                                                            |
| Refractive Index | 1.5                                                                                               |
| Solubility       | Soluble in water                                                                                  |
| Uses             | Mordant in dyeing; coagulant in water treatment; clarifying agent in paper and textile processing |
