

## SPECIFICATION

### 2-Amino-4-Chlorodiphenyl Ether

| Parameters        | Specification                                                          |
|-------------------|------------------------------------------------------------------------|
| CAS Number        | 93-67-4                                                                |
| Appearance        | White to off-white crystalline solid                                   |
| Molecular Formula | C <sub>12</sub> H <sub>10</sub> CLN <sub>0</sub>                       |
| Molecular Weight  | 219.67 g/mol                                                           |
| Boiling Point     | 270 °C                                                                 |
| Melting Point     | 120 °C                                                                 |
| Flash Point       | 160 °C                                                                 |
| Purity            | 98–99%                                                                 |
| Refractive Index  | 1.58                                                                   |
| Solubility        | Slightly soluble in water; soluble in acetone, ethanol, and chloroform |
| Uses              | Organic synthesis intermediate for dye and pharmaceutical production   |
