

## SPECIFICATION

### Aluminium Acetate

| Parameters        | Specification                                  |
|-------------------|------------------------------------------------|
| CAS Number        | 0139-12-8                                      |
| Appearance        | White crystalline solid                        |
| Molecular Formula | C <sub>6</sub> H <sub>9</sub> AlO <sub>6</sub> |
| Molecular Weight  | 204.12 g/mol                                   |
| Boiling Point     | 290 °C                                         |
| Melting Point     | 90 °C                                          |
| Flash Point       | 300 °C                                         |
| Purity            | 98–99%                                         |
| Refractive Index  | 1.46                                           |
| Solubility        | Soluble in water                               |
| Uses              | Mordant in dyeing; astringent; antiseptic      |
