

## SPECIFICATION

### Absolute White Ginger Lilly

| Parameters       | Specification                                              |
|------------------|------------------------------------------------------------|
| Appearance       | Yellow-brown resinous solid                                |
| Molecular Weight | 256.4 g/mol                                                |
| Boiling Point    | 280 °C                                                     |
| Melting Point    | 60 °C                                                      |
| Flash Point      | 65 °C                                                      |
| Purity           | 98–99%                                                     |
| Refractive Index | 1.52                                                       |
| Solubility       | Soluble in ethanol and dichloromethane; insoluble in water |
| Uses             | Fragrance ingredient; perfumery; flavoring agent           |
