

## SPECIFICATION

### Calcium Chloride Powder

| Parameters       | Specification                                    |
|------------------|--------------------------------------------------|
| Appearance       | White crystalline powder                         |
| Molecular Weight | 110.98 g/mol                                     |
| Boiling Point    | 1600 °C                                          |
| Melting Point    | 772 °C                                           |
| Flash Point      | 1000 °C                                          |
| Purity           | 98–99%                                           |
| Refractive Index | 1.63                                             |
| Solubility       | 74.5 g/100 g water at 20 °C                      |
| Uses             | Desiccant, de-icing, dust control, food additive |
