

## SPECIFICATION

### Fir Needle Oil

| Parameters       | Specification                                                                   |
|------------------|---------------------------------------------------------------------------------|
| Appearance       | Clear to pale yellow liquid                                                     |
| Molecular Weight | 150.0 g/mol                                                                     |
| Boiling Point    | 180 °C                                                                          |
| Melting Point    | -5 °C                                                                           |
| Flash Point      | 58 °C                                                                           |
| Purity           | 98–99%                                                                          |
| Refractive Index | 1.476                                                                           |
| Solubility       | Soluble in ethanol and most organic solvents, insoluble in water                |
| Uses             | Fragrance and flavor component in cosmetics, perfumes, aromatherapy, flavorings |
