

## SPECIFICATION

### Triethanolamine Hydrobromide

| Parameters        | Specification                                                                            |
|-------------------|------------------------------------------------------------------------------------------|
| CAS Number        | 25114-70-9                                                                               |
| Appearance        | White crystals                                                                           |
| Molecular Formula | C <sub>6</sub> H <sub>16</sub> BrNO <sub>3</sub>                                         |
| Molecular Weight  | 230.10 g/mol                                                                             |
| Boiling Point     | 230 °C                                                                                   |
| Melting Point     | 198 °C                                                                                   |
| Flash Point       | 120 °C                                                                                   |
| Purity            | 98–99%                                                                                   |
| Refractive Index  | 1.462                                                                                    |
| Solubility        | Soluble in water                                                                         |
| Uses              | Reagent in organic synthesis, buffer component, intermediate in pharmaceutical synthesis |
